Inventory continues to expand. It has been higher than the year before ten months in a row. Last month, it was up 101.9% over last year.

Days of Inventory, or how long it would take to sell all homes listed for sale at the current rate of sales, was down to 44 days. The average since 2003 is 89.

As of April 5th, there were 1,042 homes for sale in Santa Clara County. The average since January 2000 is 2,778. It is taking twenty-seven days to sell a home. That is the time from when a home is listed to when it goes into contract.

Prices for re-sale condos were up last month from the month before but were down year-over-year. The sales price to list price ratio was 100.6%.

Condo sales were down 20.4% year-over-year.

The real estate market in Silicon Valley is beginning to heat up for three reasons. First, spring is when the market typically becomes more active. Two, mortgage rates are at 15-month lows. Third, IPOs have started creating instant millionaires.

We expect 2019 to be a very strong year for the real estate market.

Home prices set record highs in March 2018, then started a slow decline. Although prices for single-family, re-sale homes were lower than the year before in March, they were up month-over-month.

The sales price to list price ratio, which had a peak last spring of 112.4%, had dropped ten months in a row before bottoming out at 99.5% in January. Last month it was up to 101.3%.

Home sales were down, year-over-year, for the eleventh month in a row. There were 709 homes sold in Santa Clara County last month. The average since 2000 is 987.

Inventory continues to expand. It has been higher than the year before ten months in a row. Last month, it was up 101.9% over last year.

Days of Inventory, or how long it would take to sell all homes listed for sale at the current rate of sales, was down to 44 days. The average since January 2000 is 757. Days of inventory dropped to fifty-seven. It took thirty days to sell a condo last month.

March 29, 2019 — "In like a lion, out like a lamb" is an old saying about the weather in March. Given that 30-year fixed mortgage rates are ending the month more than a third of a percentage point below where they began (not to mention they are now at 15-month lows), this old aphorism might be applied to mortgage rates this month, too.

Relentless pessimism in financial markets about prospects for growth, benign and perhaps dwindling inflation and accommodating central banks around the globe have all contributed their part to the decline in longer term interest rates. In turn, long-term fixed mortgage rates fell nearly a quarter-percent in just the past week.

Six months ago, the Fed was raising interest rates and trimming its balance sheet and projecting more of the same, and the markets were generally sanguine; three months ago the Fed was raising rates and trimming its balance sheet projecting more of the same, but markets turned decidedly unhappy. In the most recent three months, we’ve come to see the economy slow and be interrupted by a partial government shutdown, fomenting a 180-degree turn by the Fed, who now looks to leave rates alone for some time and will end balance-sheet reductions before long.

After an unexpected flare higher in January, housing starts fell back to trend in February, posting a 8.7% month-to-month decline and landing at 1.162 million (annualized) units under construction. Starts of single-family homes slumped from 907K annualized to just 805K, but this is roughly on par with figures from November and December. Conversely, multifamily construction rebounded, with this smaller market segment putting in a 17.8% increase to 357,000 units started. Permits for future building eased by 1.6%, a second small decline, landing a 1.296 million (annual) units planned. All in all, not a great report, but of course reflective of the difficult period from which we seem to be emerging... and of course, winter months aren’t often the best for construction.

That said, some optimism about housing should have come from the report on sales of new homes for February. A 4.9% increase in sales was tallied for the month, and as these sales are logged when a contract is signed, it is a figure reflective of recent demand. The increase pushed the annualized rate of

Table Definitions

---

**Median Price**
The price at which 50% of prices were higher and 50% were lower.

**Average Price**
Add all prices and divide by the number of sales.

**SP/LP**
Sales price to list price ratio or the price paid for the property divided by the asking price.

**DOI**
Days of Inventory, or how many days it would take to sell all the property for sale at the current rate of sales.

**Pend**
Property under contract to sell that has not closed escrow.

**Inven**
Number of properties actively for sale as of the last day of the month.

sale back up to 667,000 homes sold, the highest such figure since March 2018, and a second consecutive month of rising sales. Relative to the slower rate of construction above, the increase in sales depleted inventories of unsold homes closer to normal, trimming months of stock from 6.5 in January to 6.1 in February, and importantly, the number of actual units available (340,000) has now declined for the last two months as well. With mortgage rates dropping, odds favor that we’ll see firmer sales as the traditional housing season takes off, and that in turn we’ll see building activity pick back up again.

Mortgage rates are down and consumers are noticing. Even without this week’s drop in rates, applications for both purchase and refinancing are running at the best levels in a year, according to the Mortgage Bankers Association of America, and that doesn’t even yet reflect the considerable decline in rates from this week.

Of course, by the time the news hits the headlines and consumers digest it and react, markets are already changing. Although not a huge rebound, the underlying interest rates that influence fixed-rate mortgages have firmed up in the last couple of days. As such, we expect that the big decline in rates reported this week -- the largest one-week drop in 10 years’ time -- will be partially eradicated with a small rise in rates next week. At the moment, we’re of the mind that the increase will be 5-7 basis points, but with a slew of new data on tap to drive the markets in the next four days, there’s a chance for a bit more or less.

The Silicon Valley’s Real estate market is a derivative of the local economy--it prospers and withers depending on how well the local innovation-based sector performs. The San Jose Mercury News tracks the performances of the largest 150 publicly traded companies headquartered in Silicon Valley through an index called the SV150, which may be found at www.mercurynews.com. Stocks are valued based on several criteria, but one of the more important criteria is a company’s future earnings. Therefore, I see the SV150 as a leading indicator for Silicon Valley’s real estate market.
